

**Special issue on
Water Circulation Study of the Kampinoski National Park
Research performed in the UNESCO Biosphere Reserve "Kampinos Forest" within a framework of the
project "A Water Balance for the Protected Catchment Subject to Many Anthropogenic Factors" financed
by the U.S.-Poland Maria Skłodowska-Curie Joint Fund II**

Contents

Preface

Foreword

Roman Andrzejewski

1. Physiography and nature monitoring in the Kampinoski National Park and its buffer zone
Anna Andrzejewska 247-253
2. Basis for analysis of water circulation in the underground water system of the Kampinoski National Park
Tadeusz Macioszczyk..... 255-256
3. Hydrogeological conditions of the Kampinoski National Park (KNP) region
Ewa Krogulec 257-266
4. Results of geophysical research in the Kampinoski National Park area
Ewa Krogulec, Paweł Pomianowski, Przemysław Krogulec 267-272
5. Dynamic of groundwater table changes in the area of the Kampinoski National Park and its protection zone
Ewa Krogulec 273-277
6. Hydrogeological model research scope and results for the Kampinoski National Park and its protection zone
Ewa Krogulec 279-284
7. Hydrogeological mathematical model of the Kampinoski National Park central part
Ewa Krogulec, Maciej Rossa 285-290
8. Water balance as base for proper water management in the Łasica catchment (Kampinoski National Park)
Urszula Soczyńska, Małgorzata Gutry-Korycka, Paulina Pokojska, Dorota Mikos..... 291-303
9. Risk assessment of the occurrence of extreme groundwater levels, discharge and soil moisture stages
Urszula Somorowska..... 311-321
10. Mathematical modelling of water and solute vertical transport (on the example of chloride ion) in the plant-soil column in the Pożary basin
Maciej Lenartowicz..... 323-339
11. Geographic Information System (GIS) of the Kampinoski National Park and surrounding areas – for hydrogeological purposes
Maciej Roland Rossa..... 341-344
12. Electronic measurements of groundwater level in the Kampinoski National Park
Anna Andrzejewska, Monika Hardej..... 345-350
13. Long-term tendencies of water circulation in the protected lowland Łasica river basin
Małgorzata Gutry-Korycka..... 351-358
